Jihen Jabeur *Industrial Computer Engineer*

jihenjabeur7@gmail.com | +21692936844 | Sfax, Tunisia | Jihen Jabeur

SUMMARY

Industrial Computer Engineer (Sept. 2026) building software for industrial operations: process automation, migration, logistics, pruchase, ERP (D365 Business central), AI integration , Power platform decisions, Power BI and compliance.

PROFESSIONAL EXPERIENCE

Business Central Process Automation & AI technical Engineering Intern (End-of-Study Project) **02.2026 – 08.2026** | **Tunis, Tunisia (on-site)**
Talan Consulting

- Mapped the end-to-end industrial flows of 6 Dynamics 365 Business Central modules : full supply chain and identified Segregation-of-Duties (SoD) risks per process.
- Designed an authorization matrix of 47 profiles and 457 duties, validated with business supervisors, and configured it in Business Central (permission sets, user setups, profiles, role centers).
- Developed an AL per-tenant extension connected to a Python/FastAPI AI service (LLM, e5 embeddings, similarity search, RAG) that detects SoD conflicts in real time, with human validation of every AI output.
- Built governance into the solution: 72 control rules derived from SOX, COSO, GDPR and ISO 27001, kept current by a scraping pipeline that flags regulatory changes for review.
- Automated monitoring and remediation with Power BI KPIs, Power Apps and an AI Builder / Power Automate chatbot that explains violations and recommends fixes; shipped with AL unit tests and Azure DevOps CI/CD.

Test Automation Engineering Intern, *KPIT Technologies* **06.2025 – 08.2025** | **Sfax, Tunisia (remote)**

- Built a Python migration tool converting the validation test suite for automotive ECU protocols (SOME/IP, CAN, LIN) from AndiSDK to PcapPlusPlus.
- Automated the conversion pipeline with n8n and an AI analysis agent.
- Cut test execution time from 45 to 12 min (−73%) and script size by about 40%, making the framework easier to maintain.

Software Development Intern : Administrative Process Automation **06.2024 – 08.2024** | **Sfax, Tunisia (On-site)**
GPC Company

- Mapped and redesigned the customer-request workflow between GPC (photovoltaic installer) and STEG (national utility), including every validation step.
- Replaced the paper process with automatic PDF form filling, e-signature and electronic submission of documents to STEG.
- Built a desktop application backed by a cloud database to track every request submitted to STEG

EDUCATION

Preparatory Cycle in Physics and Chemistry **2020 – 2023** | **Sfax, Tunisia**
Faculty of Sciences of Sfax

Engineering Degree in Industrial Computer Science **2023 – 09.2026** | **Sfax, Tunisia**
National School of Electronics and Telecommunications of Sfax

SKILLS

Software development: Python, FastAPI, Java, C++, JavaScript, React.js, SQL, REST APIs
AI integration: LLMs, embeddings & similarity search, RAG, NLP, prompt engineering, AI Builder, Hugging Face, LangSmith
ERP & industrial processes: Dynamics 365 Business Central, AL, purchasing, sales, supply chain & logistics flows, process mapping, workflow digitization
Governance & compliance: Segregation of Duties, access control, SOX, COSO, GDPR, ISO 27001
Languages: Arabic (native) · English (fluent) · French (professional working proficiency)
Data & Power Platform: Power BI (DAX, Power Query), Power Apps, Power Automate, production KPIs (OEE), Excel, SQL
Automation & tools: Docker, Git (GitHub, GitLab), Azure DevOps CI/CD, n8n, Postman, CAN, LIN, SOME/IP
Soft-Skills: Figma, Profesional Mail redaction, Profesional reports, Illustrator, PPTX Skilled, Canva

PROJECTS

Industrial Production Monitoring Platform, *Year-End Project* **02.2025 – 04.2025**

- Simulated shop-floor machine signals (sensors, cycle counters) with noise filtering and debouncing, and streamed them to a web dashboard tracking machine state (running, idle, stopped) in real time.
- Computed production KPIs (OEE, cycle time, throughput, downtime, scrap rate) and compared operator-run vs. automated 24/7 operation in Power BI.

Truck Logistics Platform, *IEEE Organization* **10.2024 – 12.2024**

- Modeled supplier and customer flows between industrial partners and built rule-based route optimization to reduce distance, travel time and fuel use.
- Developed a web platform for fleet tracking (positions, routes, idle time, detours) with logistics KPIs: cost per km, on-time delivery rate, vehicle utilization, empty-running rate.

IEEE VOLUNTEERING

IEEE IAS ENET'Com Student Branch Chapter, *Vice-Chair* **01.2024 – 12.2024** | **Sfax, Tunisia**

- organized technical events and secured sponsorship and training partners.

IEEE ENET'Com Student Branch, *Secretary* **01.2025 – 12.2025** | **Sfax, Tunisia**

- led the secretariat team, official documentation and communication. **IEEE IAS Student Branch**
